INTRODUCTION

Congratulations on your purchase of the Yamaha YZF-R1 / YZF-R1C. This model is the result of Yamaha’s vast experience in the production of fine sporting, touring, and pacesetting racing machines. It represents the high degree of craftsmanship and reliability that have made Yamaha a leader in these fields.

This manual will give you an understanding of the operation, inspection, and basic maintenance of this motorcycle. If you have any questions concerning the operation or maintenance of your motorcycle, please consult a Yamaha dealer.

The design and manufacture of this Yamaha motorcycle fully comply with the emissions standards for clean air applicable at the date of manufacture. Yamaha has met these standards without reducing the performance or economy of operation of the motorcycle. To maintain these high standards, it is important that you and your Yamaha dealer pay close attention to the recommended maintenance schedules and operating instructions contained within this manual.
IMPORTANT MANUAL INFORMATION

Particularly important information is distinguished in this manual by the following notations:

The Safety Alert Symbol means ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!

WARNING
Failure to follow WARNING instructions could result in severe injury or death to the motorcycle operator, a bystander or a person inspecting or repairing the motorcycle.

CAUTION:
A CAUTION indicates special precautions that must be taken to avoid damage to the motorcycle.

NOTE:
A NOTE provides key information to make procedures easier or clearer.

NOTE:
- This manual should be considered a permanent part of this motorcycle and should remain with it even if the motorcycle is subsequently sold.
- Yamaha continually seeks advancements in product design and quality. Therefore, while this manual contains the most current product information available at the time of printing, there may be minor discrepancies between your motorcycle and this manual. If you have any questions concerning this manual, please consult your Yamaha dealer.

WARNING

PLEASE READ THIS MANUAL AND THE “YOU AND YOUR MOTORCYCLE: RIDING TIPS” BOOKLET CAREFULLY AND COMPLETELY BEFORE OPERATING THIS MOTORCYCLE. DO NOT ATTEMPT TO OPERATE THIS MOTORCYCLE UNTIL YOU HAVE ATTAINED ADEQUATE KNOWLEDGE OF ITS CONTROLS AND OPERATING FEATURES AND UNTIL YOU HAVE BEEN TRAINED IN SAFE AND PROPER RIDING TECHNIQUES. REGULAR INSPECTIONS AND CAREFUL MAINTENANCE, ALONG WITH GOOD RIDING SKILLS, WILL ENSURE THAT YOU SAFELY ENJOY THE CAPABILITIES AND THE RELIABILITY OF THIS MOTORCYCLE.

SAFETY INFORMATION

MOTORCYCLES ARE SINGLE TRACK VEHICLES. THEIR SAFE USE AND OPERATION ARE DEPENDENT UPON THE USE OF PROPER RIDING TECHNIQUES AS WELL AS THE EXPERTISE OF THE OPERATOR. EVERY OPERATOR SHOULD KNOW THE FOLLOWING REQUIREMENTS BEFORE RIDING THIS MOTORCYCLE.

HE OR SHE SHOULD:
1. OBTAIN THOROUGH INSTRUCTIONS FROM A COMPETENT SOURCE ON ALL ASPECTS OF MOTORCYCLE OPERATION.
2. OBSERVE THE WARNINGS AND MAINTENANCE REQUIREMENTS IN THE OWNER’S MANUAL.
3. OBTAIN QUALIFIED TRAINING IN SAFE AND PROPER RIDING TECHNIQUES.
4. OBTAIN PROFESSIONAL TECHNICAL SERVICE AS INDICATED BY THE OWNER’S MANUAL AND/OR WHEN MADE NECESSARY BY MECHANICAL CONDITIONS.

Safe riding

1. Always make pre-operation checks. Careful checks may help prevent an accident.
2. This motorcycle is designed to carry the operator and a passenger.
3. The failure of motorists to detect and recognize motorcycles in traffic is the predominating cause of automobile/motorcycle accidents. Many accidents have been caused by an automobile driver who did not see the motorcycle. Making yourself conspicuous appears to be very effective in reducing the chance of this type of accident.

Therefore:
   a. Wear a brightly colored jacket.
   b. Use extra caution when you are approaching and passing through intersections, since intersections are the most likely places for motorcycle accidents to occur.
   c. Ride where other motorists can see you. Avoid riding in another motorist’s blind spot.
SAFETY INFORMATION

4. Many accidents involve inexperienced operators. In fact, many operators who have been involved in accidents do not even have a current motorcycle license.
   a. Make sure that you are qualified and that you only lend your motorcycle to other qualified operators.
   b. Know your skills and limits. Staying within your limits may help you to avoid an accident.
   c. We recommend that you practice riding your motorcycle where there is no traffic until you have become thoroughly familiar with the motorcycle and all of its controls.

5. Many accidents have been caused by error of the motorcycle operator. A typical error made by the operator is veering wide on a turn due to EXCESSIVE SPEED or undercornering (insufficient lean angle for the speed).
   a. Always obey the speed limit and never travel faster than warranted by road and traffic conditions.
   b. Always signal before turning or changing lanes. Make sure that other motorists can see you.

6. The posture of the operator and passenger is important for proper control.
   a. The operator should keep both hands on the handlebar and both feet on the operator footrests during operation to maintain control of the motorcycle.
   b. The passenger should always hold onto the operator, the seat strap or grab bar, if equipped, with both hands and keep both feet on the passenger footrests.
   c. Never carry a passenger unless he or she can firmly place both feet on the passenger footrests.

7. Never ride under the influence of alcohol or other drugs.

8. This motorcycle is designed for on-road use only. It is not suitable for off-road use.
SAFETY INFORMATION

Protective apparel

The majority of fatalities from motorcycle accidents are the result of head injuries. The use of a safety helmet is the single most critical factor in the prevention or reduction of head injuries.
1. Always wear an approved helmet.
2. Wear a face shield or goggles. Wind in your unprotected eyes could contribute to an impairment of vision that could delay seeing a hazard.
3. The use of a jacket, heavy boots, trousers, gloves, etc., is effective in preventing or reducing abrasions or lacerations.
4. Never wear loose-fitting clothes, otherwise they could catch on the control levers, footrests, or wheels and cause injury or an accident.
5. Never touch the engine or exhaust system during or after operation. They become very hot and can cause burns. Always wear protective clothing that covers your legs, ankles, and feet.
6. A passenger should also observe the above precautions.

Modifications

Modifications made to this motorcycle not approved by Yamaha, or the removal of original equipment, may render the motorcycle unsafe for use and may cause severe personal injury. Modifications may also make your motorcycle illegal to use.

Loading and accessories

Adding accessories or cargo to your motorcycle can adversely affect stability and handling if the weight distribution of the motorcycle is changed. To avoid the possibility of an accident, use extreme caution when adding cargo or accessories to your motorcycle. Use extra care when riding a motorcycle that has added cargo or accessories. Here are some general guidelines to follow if loading cargo or adding accessories to your motorcycle:
SAFETY INFORMATION

Loading
The total weight of the operator, passenger, accessories and cargo must not exceed the maximum load limit of YZF-R1: 202 kg (445 lb)/YZF-R1C: 201 kg (443 lb). When loading within this weight limit, keep the following in mind:
1. Cargo and accessory weight should be kept as low and close to the motorcycle as possible. Make sure to distribute the weight as evenly as possible on both sides of the motorcycle to minimize imbalance or instability.
2. Shifting weights can create a sudden imbalance. Make sure that accessories and cargo are securely attached to the motorcycle before riding. Check accessory mounts and cargo restraints frequently.
3. Never attach any large or heavy items to the handlebar, front fork, or front fender. These items, including such cargo as sleeping bags, duffel bags, or tents, can create unstable handling or a slow steering response.

Accessories
Genuine Yamaha accessories have been specifically designed for use on this motorcycle. Since Yamaha cannot test all other accessories that may be available, you must personally be responsible for the proper selection, installation and use of non-Yamaha accessories. Use extreme caution when selecting and installing any accessories. Keep the following guidelines in mind, as well as those provided under “Loading” when mounting accessories.
1. Never install accessories or carry cargo that would impair the performance of your motorcycle. Carefully inspect the accessory before using it to make sure that it does not in any way reduce ground clearance or cornering clearance, limit suspension travel, steering travel or control operation, or obscure lights or reflectors.
SAFETY INFORMATION

a. Accessories fitted to the handlebar or the front fork area can create instability due to improper weight distribution or aerodynamic changes. If accessories are added to the handlebar or front fork area, they must be as lightweight as possible and should be kept to a minimum.

b. Bulky or large accessories may seriously affect the stability of the motorcycle due to aerodynamic effects. Wind may attempt to lift the motorcycle, or the motorcycle may become unstable in crosswinds. These accessories may also cause instability when passing or being passed by large vehicles.

c. Certain accessories can displace the operator from his or her normal riding position. This improper position limits the freedom of movement of the operator and may limit control ability, therefore, such accessories are not recommended.

2. Use caution when adding electrical accessories. If electrical accessories exceed the capacity of the motorcycle's electrical system an electric failure could result, which could cause a dangerous loss of lights or engine power.

Gasoline and exhaust gas

1. GASOLINE IS HIGHLY FLAMMABLE:
   a. Always turn the engine off when refueling.
   b. Take care not to spill any gasoline on the engine or exhaust system when refueling.
   c. Never refuel while smoking or in the vicinity of an open flame.

2. Never start the engine or let it run for any length of time in a closed area. The exhaust fumes are poisonous and may cause loss of consciousness and death within a short time. Always operate your motorcycle in an area that has adequate ventilation.

3. Always turn the engine off before leaving the motorcycle unattended and remove the key from the main switch. When parking the motorcycle, note the following:
SAFETY INFORMATION

a. The engine and exhaust system may be hot, therefore, park the motorcycle in a place where pedestrians or children are not likely to touch these hot areas.
b. Do not park the motorcycle on a slope or soft ground, otherwise it may fall over.
c. Do not park the motorcycle near a flammable source, (e.g., a kerosene heater, or near an open flame), otherwise it could catch fire.

4. When transporting the motorcycle in another vehicle, make sure that it is kept upright. If the motorcycle should lean over, gasoline may leak out of the fuel tank.

5. If you should swallow any gasoline, inhale a lot of gasoline vapor, or allow gasoline to get into your eyes, see your doctor immediately. If any gasoline spills on your skin or clothing, immediately wash the affected area with soap and water and change your clothes.

INSTRUMENT AND CONTROL FUNCTIONS

Main switch/steering lock
The main switch/steering lock controls the ignition and lighting systems, and is used to lock the steering. The various positions are described below.

**ON**
All electrical circuits are supplied with power, and the meter lighting, taillight, license plate light, auxiliary lights and position lights come on, and the engine can be started. The key cannot be removed.

**NOTE:**
The headlights come on automatically when the engine is started and stay on until the key is turned to “OFF”, even if the engine stalls.

**OFF**
All electrical systems are off. The key can be removed.

**LOCK**
The steering is locked, and all electrical systems are off. The key can be removed.

To lock the steering
1. Turn the handlebars all the way to the left.
2. Push the key in from the “OFF” position, and then turn it to “LOCK” while still pushing it.
3. Remove the key.

To unlock the steering
Push the key in, and then turn it to “OFF” while still pushing it.
Never turn the key to “OFF” or “LOCK” while the motorcycle is moving, otherwise the electrical systems will be switched off, which may result in loss of control or an accident. Make sure that the motorcycle is stopped before turning the key to “OFF” or “LOCK”.

**Warning**

**Indicator and warning lights**

1. Push.
2. Turn.

1. Right turn signal indicator light “ 갖고 “
2. Fuel level warning light “莩 “
3. Oil level warning light “вл “
4. Neutral indicator light “N “
5. Engine trouble warning light “요 “
6. High beam indicator light “고 “
7. Left turn signal indicator light “ 갖고 “

**Fuel level warning light “莩 “**

This warning light comes on when the fuel level drops below approximately 3.3 L (0.73 Imp gal, 0.87 US gal). When this occurs, refuel as soon as possible.

The electrical circuit of the warning light can be checked by turning the key to “ON”.

If the warning light does not come on for a few seconds, then go off, have a Yamaha dealer check the electrical circuit.

**Note:**

This model is also equipped with a self-diagnosis device for the fuel level detection circuit. If the fuel level detection circuit is defective, the following cycle will be repeated until the malfunction is corrected: The fuel level warning light will flash eight times, then go off for 2.5 seconds. If this occurs, have a Yamaha dealer check the motorcycle.
Oil level warning light " "
This warning light comes on when the engine oil level is low.
The electrical circuit of the warning light can be checked by turning the key to "ON".
If the warning light does not come on for a few seconds, then go off, have a Yamaha dealer check the electrical circuit.

Neutral indicator light "N"
This indicator light comes on when the transmission is in the neutral position.

Engine trouble warning light " "
This warning light comes on or flashes when an electrical circuit monitoring the engine is defective. When this occurs, have a Yamaha dealer check the self-diagnosis system. (See page 3-7 for an explanation of the self-diagnosis device.)
The electrical circuit of the warning light can be checked by turning the key to "ON". If the warning light does not come on for a few seconds, then go off, have a Yamaha dealer check the electrical circuit.

High beam indicator light ""
This indicator light comes on when the high beam of the headlight is switched on.

NOTE:
- Even if the oil level is sufficient, the warning light may flicker when riding on a slope or during sudden acceleration or deceleration, but this is not a malfunction.
- This model is also equipped with a self-diagnosis device for the oil level detection circuit. If the oil level detection circuit is defective, the following cycle will be repeated until the malfunction is corrected: The oil level warning light will flash ten times, then go off for 2.5 seconds. If this occurs, have a Yamaha dealer check the motorcycle.
INSTRUMENT AND CONTROL FUNCTIONS

Engine speed indicator light
The electrical circuit of the indicator light can be checked by turning the key to "ON".
If the indicator light does not come on for a few seconds, then go off, have a Yamaha dealer check the electrical circuit. (See pages 3-8–3-10 for a detailed explanation of the function of this indicator light and on how to set it.)

Coolant temperature warning light "E"
This warning light comes on when the engine overheats. When this occurs, stop the engine immediately and allow the engine to cool. The electrical circuit of the warning light can be checked by turning the key to "ON".
If the warning light does not come on for a few seconds, then go off, have a Yamaha dealer check the electrical circuit.

CAUTION:
Do not operate the engine if it is overheated.

Multi-function display

The multi-function display is equipped with the following:

- A speedometer (which shows the riding speed)
- An odometer (which shows the total distance traveled)
- Two trip meters (which show the distance traveled since they were last set to zero)
- A fuel reserve trip meter (which shows the distance traveled since the fuel level warning light came on)
- A clock
- A self-diagnosis device
- A display brightness and engine speed indicator light control mode

NOTE:

- Be sure to turn the key to "ON" before using the "SELECT" and "RESET" buttons.
- To switch the speedometer and odometer/trip meter displays between kilometers and miles, press the "SELECT" button and "RESET" button together for at least two seconds.

Odometer and trip meter modes

Pushing the "SELECT" button switches the display between the odometer mode "ODO" and the trip meter modes "TRIP 1" and "TRIP 2" in the following order:

ODO → TRIP 1 → TRIP 2 → ODO

If the fuel level warning light comes on (see page 3-2), the odometer display will automatically change to the fuel reserve trip meter mode "F-TRIP" and start counting the distance traveled from that point. In that case, pushing the "SELECT" button switches the display between the various trip meter and odometer modes in the following order:

F-TRIP → TRIP 1 → TRIP 2 → ODO → F-TRIP
INSTRUMENT AND CONTROL FUNCTIONS

To reset a tripmeter, select it by pushing the “SELECT” button, and then push the “RESET” button for at least one second. If you do not reset the fuel reserve tripmeter manually, it will reset itself automatically and the display will return to the prior mode after refueling and traveling 5 km (3 mi).

Clock mode
Turn the key to “ON”.
To change the display to the clock mode, push the “SELECT” button for at least one second.
To change the display back to the prior mode, push the “SELECT” button.
To set the clock:
1. Push the “SELECT” button and “RESET” button together for at least two seconds.
2. When the hour digits start flashing, push the “RESET” button to set the hours.
3. Push the “SELECT” button, and the minute digits will start flashing.
4. Push the “RESET” button to set the minutes.
5. Push the “SELECT” button and then release it to start the clock.

Self-diagnosis device
This model is equipped with a self-diagnosis device for various electrical circuits.
If any of those circuits are defective, the engine trouble warning light will come on, and then the multi-function display will indicate a two-digit error code (e.g., 11, 12, 13).
If the multi-function display indicates such an error code, note the code number, and then have a Yamaha dealer check the motorcycle.

CAUTION:
If the display indicates an error code, the motorcycle should be checked as soon as possible in order to avoid engine damage.
INSTRUMENT AND CONTROL FUNCTIONS

Display brightness and engine speed indicator light control mode

This mode cycles through five control functions, allowing you to make the following settings in the order listed below.

1. Display brightness: This function allows you to adjust the brightness of the multi-function display to suit the outside lighting conditions.

2. Engine speed indicator light activity: This function allows you to choose whether or not the indicator light should be activated and whether it should blink or stay on when activated.

3. Engine speed indicator light activation: This function allows you to select the engine speed at which the indicator light will be activated.

4. Engine speed indicator light deactivation: This function allows you to select the engine speed at which the indicator light will be deactivated.

5. Engine speed indicator light brightness: This function allows you to adjust the brightness of the indicator light to suit your preference.

NOTE:
- To make any settings in this mode, you have to cycle through all of its functions. However, if the key is turned to “OFF” or the engine is started before completing the procedure, only the settings made before the “SELECT” button was last pushed will be applied.
- In this mode, the multi-function display shows the current setting for each function (except the engine speed indicator light activity function).
INSTRUMENT AND CONTROL FUNCTIONS

To adjust the display brightness
1. Turn the key to “OFF”.
2. Push and hold the “SELECT” button.
3. Turn the key to “ON”, and then, after five seconds, release the “SELECT” button.
4. Push the “RESET” button to select the desired display brightness level.
5. Push the “SELECT” button to confirm the selected display brightness level. The control mode changes to the engine speed indicator light activity function.

To set the engine speed indicator light activity function
1. Push the “RESET” button to select one of the following indicator light activity settings:
   a. The indicator light will stay on when activated. (This setting is selected when the indicator light stays on.)
   b. The indicator light will flash when activated. (This setting is selected when the indicator light flashes four times per second.)
   c. The indicator light is deactivated; in other words, it will not come on or flash. (This setting is selected when the indicator light flashes once every two seconds.)
2. Push the “SELECT” button to confirm the selected indicator light activity. The control mode changes to the engine speed indicator light activation function.

To set the engine speed indicator light activation function

NOTE: The indicator light activation function can be set between 7,000 and 12,000 r/min in increments of 500 r/min.

1. Push the “RESET” button to select the desired engine speed for activating the indicator light.
2. Push the “SELECT” button to confirm the selected engine speed. The control mode changes to the engine speed indicator light deactivation function.
INSTRUMENT AND CONTROL FUNCTIONS

To set the engine speed indicator light deactivation function

NOTE:

- The indicator light deactivation function can be set between 7,000 and 12,000 r/min in increments of 500 r/min.
- Be sure to set the deactivation function to a higher engine speed than for the activation function, otherwise the engine speed indicator light will remain deactivated.

1. Push the “RESET” button to select the desired engine speed for deactivating the indicator light.
2. Push the “SELECT” button to confirm the selected engine speed. The control mode changes to the engine speed indicator light brightness function.

To adjust the engine speed indicator light brightness

1. Push the “RESET” button to select the desired indicator light brightness level.
2. Push the “SELECT” button to confirm the selected indicator light brightness level. The multi-function display will return to the odometer, tripmeter or clock mode.
INSTRUMENT AND CONTROL FUNCTIONS

1. Tachometer
2. Tachometer red zone

**Tachometer**
The electric tachometer allows the rider to monitor the engine speed and keep it within the ideal power range.

**CAUTION:**
Do not operate the engine in the tachometer red zone.
Red zone: 11,750 r/min and above

1. Dimmer switch “”/””
2. Turn signal switch “”/””
3. Horn switch “”

**Handlebar switches**

**Dimmer switch “”/””**
Set this switch to “” for the high beam and to “” for the low beam.

**Turn signal switch “”/””**
To signal a right-hand turn, push this switch to “”. To signal a left-hand turn, push this switch to “”. When released, the switch returns to the center position. To cancel the turn signal lights, push the switch in after it has returned to the center position.

**Horn switch “”**
Press this switch to sound the horn.
**INSTRUMENT AND CONTROL FUNCTIONS**

1. **Engine stop switch “○/×”**
   - **Set this switch to “○” before starting the engine. Set this switch to “×” to stop the engine in case of an emergency, such as when the motorcycle overturns or when the throttle cable is stuck.**

2. **Start switch “○”**
   - **Push this switch to crank the engine with the starter.**

**CAUTION:**
See page 5-1 for starting instructions prior to starting the engine.

---

**Clutch lever**
- The clutch lever is located at the left handlebar grip. To disengage the clutch, pull the lever toward the handlebar grip. To engage the clutch, release the lever. The lever should be pulled rapidly and released slowly for smooth clutch operation.
- The clutch lever is equipped with a clutch switch, which is part of the ignition circuit cut-off system. (See page 3-24 for an explanation of the ignition circuit cut-off system.)

**Shift pedal**
- The shift pedal is located on the left side of the engine and is used in combination with the clutch lever when shifting the gears of the 6-speed constant-mesh transmission equipped on this motorcycle.
INSTRUMENT AND CONTROL FUNCTIONS

Brake lever
The brake lever is located at the right handlebar grip. To apply the front brake, pull the lever toward the handlebar grip. The brake lever is equipped with a position adjusting dial. To adjust the distance between the brake lever and the handlebar grip, turn the adjusting dial while holding the lever pushed away from the handlebar grip. Make sure that the appropriate setting on the adjusting dial is aligned with the arrow mark on the brake lever.

Brake pedal
The brake pedal is on the right side of the motorcycle. To apply the rear brake, press down on the brake pedal.

Fuel tank cap
To open the fuel tank cap
Open the fuel tank cap lock cover, insert the key into the lock, and then turn it 1/4 turn clockwise. The lock will be released and the fuel tank cap can be opened.

To close the fuel tank cap
1. Push the fuel tank cap into position with the key inserted in the lock.
2. Turn the key counterclockwise to
the original position, remove it,
and then close the lock cover.

NOTE: The fuel tank cap cannot be closed un-
less the key is in the lock. In addition,
the key cannot be removed if the cap is
not properly closed and locked.

WARNING
Make sure that the fuel tank cap is
properly closed before riding.

Fuel
Make sure that there is sufficient fuel in
the tank. Fill the fuel tank to the bottom
of the filler tube as shown.

WARNING
- Do not overfill the fuel tank, oth-
erwise it may overflow when the
fuel warms up and expands.
- Avoid spilling fuel on the hot
engine.

Recommended fuel:
PREMIUM UNLEADED
GASOLINE ONLY
Fuel tank capacity:
Total amount:
17 L (3.74 Imp gal, 4.49 US gal)
Amount remaining when the fuel
level warning light comes on:
3.3 L (0.73 Imp gal, 0.87 US gal)

CAUTION:
Immediately wipe off spilled fuel
with a clean, dry, soft cloth, since
fuel may deteriorate painted surfac-
es or plastic parts.

CAUTION:
Use only unleaded gasoline. The
use of leaded gasoline will cause se-
vere damage to internal engine
parts, such as the valves and piston
rings, as well as to the exhaust sys-

INSTRUMENT AND CONTROL FUNCTIONS
INSTRUMENT AND CONTROL FUNCTIONS

Your Yamaha engine has been designed to use premium unleaded gasoline with a pump octane number \( [(R+M)/2] \) of 91 or higher, or a research octane number of 95 or higher. If knocking (or pinging) occurs, use a gasoline of a different brand. Use of unleaded fuel will extend spark plug life and reduce maintenance costs.

Gasohol
There are two types of gasohol: gasohol containing ethanol and that containing methanol. Gasohol containing ethanol can be used if the ethanol content does not exceed 10%. Gasohol containing methanol is not recommended by Yamaha because it can cause damage to the fuel system or vehicle performance problems.

Catalytic converter
This motorcycle is equipped with a catalytic converter in the exhaust chamber.

**WARNING**
The exhaust system is hot after operation. Make sure that the exhaust system has cooled down before doing any maintenance work.

**CAUTION:**
The following precautions must be observed to prevent a fire hazard or other damages.
- Use only unleaded gasoline. The use of leaded gasoline will cause unrepairable damage to the catalytic converter.
- Never park the motorcycle near possible fire hazards such as grass or other materials that easily burn.
- Do not allow the engine to idle too long.

Seats

Rider seat
To remove the rider seat:
Pull up the rear corners of the rider seat as shown, remove the bolts, and then pull the seat off.
### INSTRUMENT AND CONTROL FUNCTIONS

**To install the rider seat**
Insert the projection on the front of the rider seat into the seat holder as shown, place the seat in the original position, and then install the bolts.

**Passenger seat**

**To remove the passenger seat**
1. Insert the key into the seat lock, and then turn it counterclockwise.
2. While holding the key in that position, lift the front of the passenger seat and pull it forward.

**To install the passenger seat**
1. Insert the projections on the rear of the passenger seat into the seat holder as shown, and then push the front of the seat down to lock it in place.
2. Remove the key.

**NOTE:** Make sure that the seats are properly secured before riding.

1. Projection
2. Seat holder

1. Passenger seat lock
2. Unlock.

1. Projection (× 2)
2. Seat holder
Helmet holders
The helmet holders are located on the bottom of the passenger seat.

To secure a helmet to a helmet holder
1. Remove the passenger seat. (See page 3-16 for passenger seat removal and installation procedures.)
2. Attach the helmet to a helmet holder, and then securely install the passenger seat.

CAUTION:
Some helmets may contact the muffler when secured to the right side helmet holder because of their size or shape. Be sure that your helmet does not contact the muffler when it is secured to the helmet holder.

To release a helmet from a helmet holder
Remove the passenger seat, remove the helmet from the helmet holder, and then install the seat.

Storage compartment
The storage compartment is located under the passenger seat. (See page 3-16 for passenger seat removal and installation procedures.)

WARNING
- Do not exceed the load limit of 3 kg (7 lb) for the storage compartment.
- Do not exceed the maximum load of YZF-R1: 202 kg (445 lb)/YZF-R1C: 201 kg (443 lb) for the vehicle.
Adjusting the front fork
This front fork is equipped with spring preload adjusting bolts, rebound damping force adjusting screws and compression damping force adjusting screws.

**WARNING**
Always adjust both fork legs equally, otherwise poor handling and loss of stability may result.

**Spring preload**
To increase the spring preload and thereby harden the suspension, turn the adjusting bolt on each fork leg in direction a. To decrease the spring preload and thereby soften the suspension, turn the adjusting bolt on each fork leg in direction b.

**NOTE:**
Align the appropriate groove on the adjusting mechanism with the top of the front fork cap bolt.

**CAUTION:**

Never attempt to turn an adjusting mechanism beyond the maximum or minimum settings.

**NOTE:**

Although the total number of clicks of a damping force adjusting mechanism may not exactly match the above specifications due to small differences in production, the actual number of clicks always represents the entire adjusting range. To obtain a precise adjustment, it would be advisable to check the number of clicks of each damping force adjusting mechanism and to modify the specifications as necessary.
Adjusting the shock absorber assembly
This shock absorber assembly is equipped with a spring preload adjusting ring and rebound and compression damping force adjusting screws.

**CAUTION:**
Never attempt to turn an adjusting mechanism beyond the maximum or minimum settings.

**Spring preload**
To increase the spring preload and thereby harden the suspension, turn the adjusting ring in direction a. To decrease the spring preload and thereby soften the suspension, turn the adjusting ring in direction b.

**NOTE:**
- Align the appropriate notch in the adjusting ring with the position indicator on the shock absorber.
- Use the special wrench included in the owner's tool kit to make the adjustment.

WARNING
This shock absorber contains highly pressurized nitrogen gas. For proper handling, read and understand the following information before handling the shock absorber. The manufacturer cannot be held responsible for property damage or personal injury that may result from improper handling.

- Do not tamper with or attempt to open the gas cylinder.
- Do not subject the shock absorber to an open flame or other high heat sources, otherwise it may explode due to excessive gas pressure.
- Do not deform or damage the gas cylinder in any way, as this will result in poor damping performance.
- Always have a Yamaha dealer service the shock absorber.
**INSTRUMENT AND CONTROL FUNCTIONS**

**Luggage strap holders**
There are four luggage strap holders on the bottom of the passenger seat. To use the strap holders, remove the passenger seat, unhook the straps, and then install the seat with the straps hanging out from under the passenger seat. (See page 3-16 for passenger seat removal and installation procedures.)

**EXUP system**
This motorcycle is equipped with Yamaha's EXUP (EXhaust Ultimate Power valve) system. This system boosts engine power by means of a valve that regulates the diameter of the exhaust pipe. The EXUP system valve is constantly adjusted in accordance with the engine speed by a computer-controlled servomotor.

**CAUTION:**
- The EXUP system has been set and extensively tested at the Yamaha factory. Changing these settings without sufficient technical knowledge may result in poor performance or damage to the engine.
- If the EXUP system does not operate, have a Yamaha dealer check it.

**Sidestand**
The sidestand is located on the left side of the frame. Raise the sidestand or lower it with your foot while holding the motorcycle upright.

**NOTE:**
The built-in sidestand switch is part of the ignition circuit cut-off system, which cuts the ignition in certain situations. (See further down for an explanation of the ignition circuit cut-off system.)
**WARNING**
The motorcycle must not be ridden with the sidestand down, or if the sidestand cannot be properly moved up (or does not stay up), otherwise the sidestand could contact the ground and distract the operator, resulting in a possible loss of control. Yamaha’s ignition circuit cut-off system has been designed to assist the operator in fulfilling the responsibility of raising the sidestand before starting off. Therefore, check this system regularly as described below and have a Yamaha dealer repair it if it does not function properly.

---

**Ignition circuit cut-off system**
The ignition circuit cut-off system (comprising the sidestand switch, clutch switch and neutral switch) has the following functions.

- It prevents starting when the transmission is in gear and the sidestand is up, but the clutch lever is not pulled.
- It prevents starting when the transmission is in gear and the clutch lever is pulled, but the sidestand is still down.
- It cuts the running engine when the transmission is in gear and the sidestand is moved down.

Periodically check the operation of the ignition circuit cut-off system according to the following procedure.

**WARNING**
If a malfunction is noted, have a Yamaha dealer check the system before riding.
With the engine turned off:
1. Move the sidestand down.
2. Make sure that the engine stop switch is set to “・”.
3. Turn the key to “ON”.
4. Shift the transmission into the neutral position.
5. Push the start switch.

**Does the engine start?**

- YES
- NO

With the engine still running:
6. Move the sidestand up.
7. Keep the clutch lever pulled.
8. Shift the transmission into gear.
9. Move the sidestand down.

**Does the engine stall?**

- YES
- NO

After the engine has stalled:
10. Move the sidestand up.
11. Keep the clutch lever pulled.
12. Push the start switch.

**Does the engine start?**

- YES
- NO

---

**NOTE:** This check is most reliable if performed with a warmed-up engine.

- The neutral switch may be defective. **The motorcycle should not be ridden** until checked by a Yamaha dealer.

- The sidestand switch may be defective. **The motorcycle should not be ridden** until checked by a Yamaha dealer.

- The clutch switch may be defective. **The motorcycle should not be ridden** until checked by a Yamaha dealer.

---

The system is OK. **The motorcycle can be ridden.**
PRE-OPERATION CHECKS

Pre-operation check list .......................................................... 4-1
PRE-OPERATION CHECKS

The condition of a vehicle is the owner’s responsibility. Vital components can start to deteriorate quickly and unexpectedly, even if the vehicle remains unused (for example, as a result of exposure to the elements). Any damage, fluid leakage or loss of tire air pressure could have serious consequences. Therefore, it is very important, in addition to a thorough visual inspection, to check the following points before each ride.

NOTE:

Pre-operation checks should be made each time the motorcycle is used. Such an inspection can be accomplished in a very short time; and the added safety it assures is more than worth the time involved.

**WARNING**

If any item in the Pre-operation check list is not working properly, have it inspected and repaired before operating the motorcycle.
OPERATION AND IMPORTANT RIDING POINTS

Starting the engine ................................................................. 5-1
Shifting ................................................................................. 5-3
Engine break-in ................................................................. 5-4
Parking ................................................................................. 5-5
OPERATION AND IMPORTANT RIDING POINTS

WARNING

- Become thoroughly familiar with all operating controls and their functions before riding. Consult a Yamaha dealer regarding any control or function that you do not thoroughly understand.
- Never start the engine or operate it in a closed area for any length of time. Exhaust fumes are poisonous, and inhaling them can cause loss of consciousness and death within a short time. Always make sure that there is adequate ventilation.
- Before starting out, make sure that the sidestand is up. If the sidestand is not raised completely, it could contact the ground and distract the operator, resulting in a possible loss of control.

WARNING

- Make sure not to store personal items near the air cleaner intake, otherwise air intake will be blocked and performance will suffer.
- Make sure not to put anything near the battery and its terminals, otherwise electrical failure and acid corrosion may result.

CAUTION:

Starting the engine

In order for the ignition circuit cut-off system to enable starting, one of the following conditions must be met:

- The transmission is in the neutral position.
- The transmission is in gear with the clutch lever pulled and the sidestand up.

WARNING

- Before starting the engine, check the function of the ignition circuit cut-off system according to the procedure described on page 3-25.
- Never ride with the sidestand down.

1. Turn the key to “ON” and make sure that the engine stop switch is set to “( )”.

5-1
OPERATION AND IMPORTANT RIDING POINTS

CAUTION: The following warning lights and indicator light should come on for a few seconds, then go off.
- Oil level warning light
- Fuel level warning light
- Coolant temperature warning light
- Engine speed indicator light
- Engine trouble warning light

If a warning or indicator light does not go off, see pages 3-2–3-5 for the corresponding warning and indicator light circuit check.

2. Shift the transmission into the neutral position.

NOTE: When the transmission is in the neutral position, the neutral indicator light should be on, otherwise have a Yamaha dealer check the electrical circuit.

3. Start the engine by pushing the start switch.

NOTE: If the engine fails to start, release the start switch, wait a few seconds, and then try again. Each starting attempt should be as short as possible to preserve the battery. Do not crank the engine more than 10 seconds on any one attempt.

CAUTION: For maximum engine life, always warm the engine up before starting off. Never accelerate hard when the engine is cold!

NOTE: The engine is warm when it quickly responds to the throttle.
OPERATION AND IMPORTANT RIDING POINTS

Shifting
Shifting gears lets you control the amount of engine power available for starting off, accelerating, climbing hills, etc. The gear positions are shown in the illustration.

NOTE:
To shift the transmission into the neutral position, press the shift pedal down repeatedly until it reaches the end of its travel, and then slightly raise it.

CAUTION:
- Even with the transmission in the neutral position, do not coast for long periods of time with the engine off, and do not tow the motorcycle for long distances. The transmission is properly lubricated only when the engine is running. Inadequate lubrication may damage the transmission.
- Always use the clutch while changing gears to avoid damaging the engine, transmission, and drive train, which are not designed to withstand the shock of forced shifting.

To start out and accelerate
1. Pull the clutch lever to disengage the clutch.
2. Shift the transmission into first gear. The neutral indicator light should go out.
3. Open the throttle gradually, and at the same time, release the clutch lever slowly.
4. At the recommended shift points shown in the table on page 5-4, close the throttle, and at the same time, quickly pull the clutch lever in.
5. Shift the transmission into second gear. (Make sure not to shift the transmission into the neutral position.)
6. Open the throttle part way and gradually release the clutch lever.
7. Follow the same procedure when shifting to the next higher gear.

NOTE:
Always shift gears at the recommended shift points.
OPERATION AND IMPORTANT RIDING POINTS

To decelerate
1. Apply both the front and the rear brakes to slow the motorcycle.
2. Shift the transmission into first gear when the motorcycle reaches 25 km/h (15.5 mi/h). If the engine is about to stall or runs very roughly, pull the clutch lever in and use the brakes to stop the motorcycle.
3. Shift the transmission into the neutral position when the motorcycle is almost completely stopped. The neutral indicator light should come on.

Recommended shift points
The recommended shift points during acceleration and deceleration are shown in the table below.

Engine break-in
There is never a more important period in the life of your engine than the period between 0 and 1,600 km (1,000 mi). For this reason, you should read the following material carefully.
Since the engine is brand new, do not put an excessive load on it for the first 1,600 km (1,000 mi). The various parts in the engine wear and polish themselves to the correct operating clearances. During this period, prolonged full-throttle operation or any condition that might result in engine overheating must be avoided.
OPERATION AND IMPORTANT RIDING POINTS

0–1,000 km (0–600 mi)
Avoid prolonged operation above 6,000 r/min.

1,000–1,600 km (600–1,000 mi)
Avoid prolonged operation above 7,000 r/min.

CAUTION:
After 1,000 km (600 mi) of operation, the engine oil must be changed and the oil filter cartridge replaced.

1,600 km (1,000 mi) and beyond
The vehicle can now be operated normally.

CAUTION:
- Keep the engine speed out of the tachometer red zone.
- If any engine trouble should occur during the engine break-in period, immediately have a Yamaha dealer check the vehicle.

NOTE: During and after the engine break-in period, the exhaust heat may cause discoloration of the exhaust pipe, but this is normal.

Parking
When parking, stop the engine, and then remove the key from the main switch.

WARNING
- Since the engine and exhaust system can become very hot, park in a place where pedestrians or children are not likely to touch them.
- Do not park on a slope or on soft ground, otherwise the motorcycle may overturn.

CAUTION:
Never park in an area where there are fire hazards such as grass or other flammable materials.

Safety is an obligation of the owner. Periodic inspection, adjustment and lubrication will keep your vehicle in the safest and most efficient condition possible. The most important points of motorcycle inspection, adjustment, and lubrication are explained on the following pages.

Maintenance, replacement, or repair of the emission control devices and systems may be performed by any repair establishment or individual that is certified (if applicable).

**WARNING**

If you are not familiar with motorcycle maintenance work, have a Yamaha dealer do it for you.

**PERIODIC MAINTENANCE**

**PERIODIC MAINTENANCE**

Proper periodic maintenance of your motorcycle is important in order to enjoy long, pleasurable service. Especially important are the maintenance services related to emissions control. These controls not only function to ensure cleaner air, but are also vital to proper engine operation and maximum performance. In the following periodic maintenance charts, the services related to emissions control are grouped separately. These services require specialized data, knowledge, and equipment. Yamaha dealers are trained and equipped to perform these particular services.

**Owner’s tool kit**

The owner’s tool kit is located inside the storage compartment under the passenger seat. (See page 3-16 for passenger seat removal and installation procedures.)

The service information included in this manual and the tools provided in the owner's tool kit are intended to assist you in the performance of preventive maintenance and minor repairs. However, additional tools such as a torque wrench may be necessary to perform certain maintenance work correctly.
NOTE: If you do not have the tools or experience required for a particular job, have a Yamaha dealer perform it for you.

WARNING
Modifications not approved by Yamaha may cause loss of performance, excessive emissions, and render the vehicle unsafe for use. Consult a Yamaha dealer before attempting any changes.

PERIODIC MAINTENANCE AND MINOR REPAIR

**NOTE:** Since these items require special tools, data and technical skills, have a Yamaha dealer perform the service.

**NOTE:** From 24,000 mi (37,000 km) or 36 months, repeat the maintenance intervals starting from 4,000 mi (7,000 km) or 6 months.

**NOTE:**

- **Air filter**
  - This model's air filter is equipped with a disposable oil-coated paper element, which must not be cleaned with compressed air to avoid damaging it.
  - The air filter element needs to be replaced more frequently when riding in unusually wet or dusty areas.

- **Hydraulic brake service**
  - After disassembling the brake master cylinders and calipers, always change the fluid. Regularly check the brake fluid levels and fill the reservoirs as required.
  - Every two years replace the internal components of the brake master cylinders and calipers, and change the brake fluid.
  - Replace the brake hoses every four years and if cracked or damaged.
PERIODIC MAINTENANCE AND MINOR REPAIR

Removing and installing cowlings and panels
The cowlings and panels shown above need to be removed to perform some of the maintenance jobs described in this chapter. Refer to this section each time a cowling or panel needs to be removed and installed.
PERIODIC MAINTENANCE AND MINOR REPAIR

Cowling A

To remove the cowling
1. Remove the quick fasteners at the front of the cowling.
2. Remove the bolts and screw, and then loosen the quick fastener screws 1/4 turn counterclockwise.
3. Slide the cowling backward at the area shown.
4. Disconnect the turn signal light lead coupler.
5. Remove the screws, and then take the cowling off.

To install the cowling
1. Install the screws.
2. Connect the turn signal light lead coupler.
3. Place the cowling in the original position.
4. Install the screw and the bolts, tighten the quick fastener screws, and then install the quick fasteners.
PERIODIC MAINTENANCE AND MINOR REPAIR

1. Quick fastener

NOTE: To install the quick fastener, push the center pin out so that it will protrude from the fastener head, insert the fastener into the cowling, and then push the protruding pin in until it is flush with the fastener head.

Cowling B

To remove the cowling
Remove the bolts, loosen the quick fastener screws 1/4 turn counterclockwise, and then take the cowling off.

To install the cowling
Place the cowling in the original position, and then tighten the quick fastener screws and install the bolts.
PERIODIC MAINTENANCE AND MINOR REPAIR

Checking the spark plugs

The spark plugs are important engine components, which should be checked periodically, preferably by a Yamaha dealer. Since heat and deposits will cause any spark plug to slowly erode, they should be removed and checked in accordance with the periodic maintenance and lubrication chart. In addition, the condition of the spark plugs can reveal the condition of the engine.

The porcelain insulator around the center electrode of each spark plug should be a medium-to-light tan (the ideal color when the motorcycle is ridden normally), and all spark plugs installed in the engine should have the same color. If any spark plug shows a distinctly different color, the engine could be defective. Do not attempt to diagnose such problems yourself. Instead, have a Yamaha dealer check the motorcycle. If a spark plug shows signs of electrode erosion and excessive carbon or other deposits, it should be replaced.

Specified spark plug:
CR9EIA 9 (NGK) or IU27D (DENSO)

Panels A and B

To remove one of the panels
Loosen the quick fastener screws 1/4 turn counterclockwise, remove the screw, and then take the panel off.

To install the panel
Place the panel in the original position, tighten the quick fastener screws, and then install the screw.
Before installing a spark plug, the spark plug gap should be measured with a wire thickness gauge and, if necessary, adjusted to specification.

**Spark plug gap:**

0.8–0.9 mm (0.03–0.04 in)

**NOTE:**

- Spark plug gap:
  0.8–0.9 mm (0.03–0.04 in)

Clean the surface of the spark plug gasket and its mating surface, and then wipe off any grime from the spark plug threads.

**Tightening torque:**

Spark plug:

12.5 Nm (1.25 m-kgf, 9.0 ft-lbf)

If a torque wrench is not available when installing a spark plug, a good estimate of the correct torque is 1/4–1/2 turn past finger tight. However, the spark plug should be tightened to the specified torque as soon as possible.
PERIODIC MAINTENANCE AND MINOR REPAIR

Canister (for California only)
This model is equipped with a canister to prevent the discharging of fuel vapor into the atmosphere. Before operating this motorcycle, make sure to check the following:
- Check each hose connection.
- Check each hose and canister for cracks or damage. Replace if damaged.

- Make sure that the canister breather is not blocked, and if necessary, clean it.

Engine oil and oil filter cartridge
The engine oil level should be checked before each ride. In addition, the oil must be changed and the oil filter cartridge replaced at the intervals specified in the periodic maintenance and lubrication chart.

To check the engine oil level
1. Place the motorcycle on a level surface and hold it in an upright position.

NOTE: Make sure that the motorcycle is positioned straight up when checking the oil level. A slight tilt to the side can result in a false reading.
PERIODIC MAINTENANCE AND MINOR REPAIR

2. Start the engine, warm it up for several minutes, and then turn it off.
3. Wait a few minutes until the oil settles, and then check the oil level through the check window located at the bottom-right side of the crankcase.

NOTE:

The engine oil should be between the minimum and maximum level marks.

4. If the engine oil is at or below the minimum level mark, add sufficient oil of the recommended type to raise it to the correct level.

To change the engine oil (with or without oil filter cartridge replacement)

1. Remove cowling B. (See page 6-10 for cowling removal and installation procedures.)
2. Start the engine, warm it up for several minutes, and then turn it off.
3. Place an oil pan under the engine to collect the used oil.
4. Remove the engine oil filler cap and drain bolt to drain the oil from the crankcase.

NOTE: Skip steps 5–7 if the oil filter cartridge is not being replaced.
PERIODIC MAINTENANCE AND MINOR REPAIR

5. Remove the oil filter cartridge with an oil filter wrench.

NOTE:
An oil filter wrench is available at a Yamaha dealer.

6. Apply a thin coat of engine oil to the O-ring of the new oil filter cartridge.

NOTE:
Make sure that the O-ring is properly seated.

7. Install the new oil filter cartridge, and then tighten it to the specified torque with a torque wrench.

8. Install the engine oil drain bolt, and then tighten it to the specified torque.

NOTE:
Check the washer for damage and replace it if necessary.

Tightening torque:
Oil filter cartridge:
17 Nm (1.7 m-kgf, 12 ft-lbf)
9. Add the specified amount of the recommended engine oil, and then install and tighten the oil filler cap.

CAUTION: 
- In order to prevent clutch slippage (since the engine oil also lubricates the clutch), do not mix any chemical additives. Do not use oils with a diesel specification of “CD” or oils of a higher quality than specified. In addition, do not use oils labeled “ENERGY CONSERVING II” or higher.
- Make sure that no foreign material enters the crankcase.

10. Start the engine, and then let it idle for several minutes while checking it for oil leakage. If oil is leaking, immediately turn the engine off and check for the cause.

NOTE: 
After the engine is started, the engine oil level warning light should go off if the oil level is sufficient.

11. Turn the engine off, and then check the oil level and correct it if necessary.

12. Install the cowling.
PERIODIC MAINTENANCE AND MINOR REPAIR

Coolant
The coolant level should be checked before each ride. In addition, the coolant must be changed at the intervals specified in the periodic maintenance and lubrication chart.

To check the coolant level
1. Place the motorcycle on a level surface and hold it in an upright position.

NOTE:
- The coolant level must be checked on a cold engine since the level varies with engine temperature.
- Make sure that the motorcycle is positioned straight up when checking the coolant level. A slight tilt to the side can result in a false reading.

2. Check the coolant level in the coolant reservoir.

NOTE:
The coolant should be between the minimum and maximum level marks.

3. If the coolant is at or below the minimum level mark, remove panel A (See page 6-11 for panel removal and installation procedures.), remove the reservoir cap, add coolant to the maximum level mark, and then install the reservoir cap and the panel.

Coolant reservoir capacity
(up to the maximum level mark):
0.24 L (0.21 Imp qt, 0.25 US qt)
PERIODIC MAINTENANCE AND MINOR REPAIR

CAUTION:

- If coolant is not available, use distilled water or soft tap water instead. Do not use hard water or salt water since it is harmful to the engine.
- If water has been used instead of coolant, replace it with coolant as soon as possible, otherwise the engine may not be sufficiently cooled and the cooling system will not be protected against frost and corrosion.
- If water has been added to the coolant, have a Yamaha dealer check the antifreeze content of the coolant as soon as possible, otherwise the effectiveness of the coolant will be reduced.

WARNING

Never attempt to remove the radiator cap when the engine is hot.

NOTE:

- The radiator fan is automatically switched on or off according to the coolant temperature in the radiator.
- If the engine overheats, see page 6-51 for further instructions.

To change the coolant

1. Place the motorcycle on a level surface and let the engine cool if necessary.
2. Remove cowlings A and B, and panel A. (See pages 6-9–6-11 for cowling and panel removal and installation procedures.)
3. Place a container under the engine to collect the used coolant.

To change the coolant

1. Place the motorcycle on a level surface and let the engine cool if necessary.
2. Remove cowlings A and B, and panel A. (See pages 6-9–6-11 for cowling and panel removal and installation procedures.)
3. Place a container under the engine to collect the used coolant.
PERIODIC MAINTENANCE AND MINOR REPAIR

4. Remove the clutch cable holder from the coolant reservoir as shown.
5. Remove the coolant reservoir by removing the bolts.
6. Remove the coolant reservoir cap, and then turn the coolant reservoir upside down to empty it.
7. Install the coolant reservoir by installing the bolts, and then install the clutch cable holder.
8. Remove the radiator cap.

9. Remove the coolant drain bolt to drain the cooling system.
10. Loosen the radiator hose clamp screw located at the left side of the engine, and then pull off the hose to drain the radiator.

WARNING
Never attempt to remove the radiator cap when the engine is hot.
11. After the coolant is completely drained, thoroughly flush the cooling system with clean tap water.
12. Install the coolant drain bolt, and then tighten it to the specified torque.

NOTE: Check the washer for damage and replace it if necessary.

13. Connect the radiator hose, and then tighten the clamp screw.
14. Pour the specified amount of recommended coolant into the radiator and reservoir.

Antifreeze/water mixture ratio: 1:1
Recommended antifreeze:
- High-quality ethylene glycol antifreeze containing corrosion inhibitors for aluminum engines

Coolant quantity:
- Total amount: 2.45 L (2.16 Imp qt, 2.59 US qt)
- Coolant reservoir capacity (up to the maximum level mark): 0.24 L (0.21 Imp qt, 0.25 US qt)

CAUTION:
- If coolant is not available, use distilled water or soft tap water instead. Do not use hard water or salt water since it is harmful to the engine.
- If water has been used instead of coolant, replace it with coolant as soon as possible, otherwise the engine may not be sufficiently cooled and the cooling system will not be protected against frost and corrosion.
- If water has been added to the coolant, have a Yamaha dealer check the antifreeze content of the coolant as soon as possible, otherwise the effectiveness of the coolant will be reduced.
PERIODIC MAINTENANCE AND MINOR REPAIR

15. Install the radiator cap and the coolant reservoir cap, and then start the engine and let it idle for several minutes. During this period, rev the engine two or three times between 3,000–5,000 r/min, and then turn it off.

16. Remove the radiator cap to check the coolant level in the radiator. If necessary, add sufficient coolant until it reaches the top of the radiator, and then install the radiator cap.

17. Check the coolant level in the reservoir. If necessary, remove the coolant reservoir cap, add coolant to the maximum level mark, and then install the cap.

18. Start the engine, and then check the vehicle for coolant leakage. If coolant is leaking, have a Yamaha dealer check the cooling system.

19. Install the cowlings and the panel.

Replacing the air filter element

The air filter element should be replaced at the intervals specified in the periodic maintenance and lubrication chart. Replace the air filter element more frequently if you are riding in unusually wet or dusty areas.

1. Bolt

3. Lift the front of the fuel tank, and then tilt it back and away from the air filter case. (Do not disconnect the fuel hoses!)

</table>

4. Disconnect the fuel tank breather hose and the fuel tank overflow hose.
PERIODIC MAINTENANCE AND MINOR REPAIR

5. Remove the air filter case cover by removing the screws and bolt.
6. Pull the air filter element out.
7. Insert a new air filter element into the air filter case.

**CAUTION:**
- Make sure that the air filter element is properly seated in the air filter case.
- The engine should never be operated without the air filter element installed, otherwise the pistons and/or cylinders may become excessively worn.

8. Install the air filter case cover by installing the screws and bolt.

9. Connect the fuel tank breather hose and the fuel tank overflow hose, place the fuel tank in the original position, and then install the bolt.
PERIODIC MAINTENANCE AND MINOR REPAIR

WARNING
- Before installing the fuel tank, make sure that the fuel hoses are not damaged. If any fuel hose is damaged, do not start the engine but have a Yamaha dealer replace the hose, otherwise fuel may leak.
- Make sure that the fuel hoses are properly connected and routed, and not pinched.
- Be sure to place the fuel tank breather hose and the fuel tank overflow hose in the original position.

1. Fuel tank breather hose
2. Fuel tank overflow hose

a. Throttle cable free play

Adjusting the throttle cable free play
The throttle cable free play should measure 3–5 mm (0.1–0.2 in) at the throttle grip. Periodically check the throttle cable free play and, if necessary, have a Yamaha dealer adjust it.

10. Install the rider seat.

Adjusting the valve clearance
The valve clearance changes with use, resulting in improper air-fuel mixture and/or engine noise. To prevent this from occurring, the valve clearance must be adjusted by a Yamaha dealer at the intervals specified in the periodic maintenance and lubrication chart.
PERIODIC MAINTENANCE AND MINOR REPAIR

Tires
To maximize the performance, durability, and safe operation of your motorcycle, note the following points regarding the specified tires.

Tire air pressure
The tire air pressure should be checked and, if necessary, adjusted before each ride.

**WARNING**
- The tire air pressure must be checked and adjusted on cold tires (i.e., when the temperature of the tires equals the ambient temperature).
- The tire air pressure must be adjusted in accordance with the riding speed and with the total weight of rider, passenger, cargo, and accessories approved for this model.

**WARNING**
Proper loading of your motorcycle is important for several characteristics of your motorcycle, such as handling, braking, performance and safety. Do not carry loosely packed items that can shift. Securely pack your heaviest items close to the center of the motorcycle, and distribute the weight evenly from side to side. Properly adjust the suspension for your load, and check the condition and pressure of your tires. NEVER OVERLOAD YOUR MOTORCYCLE. Make sure that the total weight of the cargo, rider, passenger, and accessories (cowling, saddlebags, etc. if approved for this model) does not exceed the maximum load of the motorcycle. Operation of an overloaded motorcycle could cause tire damage, an accident, or even injury.

PERIODIC MAINTENANCE AND MINOR REPAIR

Tire inspection
Always check the tires before operating the motorcycle. If a tire tread shows crosswise lines (minimum tread depth), if the tire has a nail or glass fragments in it, or if the sidewall is cracked, contact a Yamaha dealer immediately and have the tire replaced.

WARNING
- It is dangerous to ride with a worn-out tire. When a tire tread begins to show crosswise lines, have a Yamaha dealer replace the tire immediately.
- The replacement of all wheel and brake-related parts, including the tires, should be left to a Yamaha dealer, who has the necessary professional knowledge and experience.

Tire information
This motorcycle is equipped with cast wheels and tubeless tires with valves.

Minimum tire tread depth (front and rear) 1.0 mm (0.04 in)
PERIODIC MAINTENANCE AND MINOR REPAIR

**WARNING**

- The front and rear tires should be of the same make and design, otherwise the handling characteristics of the motorcycle cannot be guaranteed.
- After extensive tests, only the tires listed below have been approved for this model by Yamaha Motor Co., Ltd.
- Always make sure that the valve caps are securely installed to prevent air pressure leakage.
- Use only the tire valves and valve cores listed below to avoid tire deflation during a high-speed ride.

**WARNING**

This motorcycle is fitted with super-high-speed tires. Note the following points in order to make the most efficient use of these tires.

- Use only the specified replacement tires. Other tires may run the danger of bursting at super high speeds.
- Brand-new tires can have a relatively poor grip on certain road surfaces until they have been “broken in”. Therefore, it is advisable before doing any high-speed riding to ride conservatively for approximately 100 km (60 mi) after installing a new tire.
- The tires must be warmed up before a high-speed run.
- Always adjust the tire air pressure according to the operating conditions.

Cast wheels
To maximize the performance, durability, and safe operation of your motorbike, note the following points regarding the specified wheels.

- The wheel rims should be checked for cracks, bends or warpage before each ride. If any damage is found, have a Yamaha dealer replace the wheel. Do not attempt even the smallest repair to the wheel. A deformed or cracked wheel must be replaced.
- The wheel should be balanced whenever either the tire or wheel has been changed or replaced. An unbalanced wheel can result in poor performance, adverse handling characteristics, and a shortened tire life.
- Ride at moderate speeds after changing a tire since the tire surface must first be "broken in" for it to develop its optimal characteristics.

Accessories and replacement parts

**WARNING**

This motorcycle is not designed to pull a trailer or to be attached to a sidecar. The accessories or replacement parts you choose for your motorcycle should be designed specifically for this model, and they must be securely mounted to maintain the inherent stability of the original design. Genuine Yamaha Parts and Accessories are designed and tested to be compatible with your motorcycle. Please consider Genuine Yamaha Parts and Accessories before making a purchase. Use of non-Yamaha-approved accessories or replacement parts may cause loss of handling stability and riding safety. Since Yamaha cannot control the quality of accessories or parts manufactured by other companies, Yamaha cannot be held liable for any consequences caused by the use of items which have not been approved by Yamaha.
PERIODIC MAINTENANCE AND MINOR REPAIR

Adjusting the clutch lever free play

The clutch lever free play should measure 10–15 mm (0.4–0.6 in) as shown. Periodically check the clutch lever free play and, if necessary, adjust it as follows.

To increase the clutch lever free play, turn the adjusting bolt at the clutch lever in direction A. To decrease the clutch lever free play, turn the adjusting bolt in direction B.

NOTE:

If the specified clutch lever free play cannot be obtained as described above, proceed as follows.

1. Fully turn the adjusting bolt at the clutch lever in direction ③ to loosen the clutch cable.

2. Remove cowling B. (See page 6-10 for cowling removal and installation procedures.)

3. Loosen the locknut at the crankcase.

4. To increase the clutch lever free play, turn the adjusting nut in direction ⑧. To decrease the clutch lever free play, turn the adjusting nut in direction ⑦.

5. Tighten the locknut.

6. Install the cowling.
PERIODIC MAINTENANCE AND MINOR REPAIR

Adjusting the brake pedal position
The top of the brake pedal should be positioned approximately 38–42 mm (1.5–1.7 in) below the bottom of the footrest bracket as shown. Periodically check the brake pedal position and, if necessary, have a Yamaha dealer adjust it.

WARNING
A soft or spongy feeling in the brake pedal can indicate the presence of air in the hydraulic system. If there is air in the hydraulic system, have a Yamaha dealer bleed the system before operating the motorcycle. Air in the hydraulic system will diminish the braking performance, which may result in loss of control and an accident.

Adjusting the rear brake light switch
The rear brake light switch, which is activated by the brake pedal, is properly adjusted when the brake light comes on just before braking takes effect. If necessary, adjust the brake light switch as follows.

Turn the adjusting nut while holding the rear brake light switch in place. To make the brake light come on earlier, turn the adjusting nut in direction a. To make the brake light come on later, turn the adjusting nut in direction b.
Checking the front and rear brake pads
The front and rear brake pads must be checked for wear at the intervals specified in the periodic maintenance and lubrication chart.

Front brake pads
Each front brake pad is provided with a wear indicator groove, which allows you to check the brake pad wear without having to disassemble the brake. To check the brake pad wear, check the wear indicator groove. If a brake pad has worn to the point that the wear indicator groove has almost disappeared, have a Yamaha dealer replace the brake pads as a set.

Rear brake pads
Each rear brake pad is provided with a wear indicator groove, which allows you to check the brake pad wear without having to disassemble the brake. Check the brake pad wear as follows.
1. Remove the brake caliper bolt, and then tilt the caliper forward to inspect the wear indicator groove. If a brake pad has worn to the point that the wear indicator groove has almost disappeared, have a Yamaha dealer replace the brake pads as a set.
PERIODIC MAINTENANCE AND MINOR REPAIR

2. Install the brake caliper bolt, and then tighten it to the specified torque.

Tightening torque:
Brake caliper bolt: 27 Nm (2.7 m·kgf, 19.5 ft·lbf)

Checking the brake fluid level
Insufficient brake fluid may allow air to enter the brake system, possibly causing it to become ineffective.
Before riding, check that the brake fluid is above the minimum level mark and replenish if necessary. A low brake fluid level may indicate worn brake pads and/or brake system leakage. If the brake fluid level is low, be sure to check the brake pads for wear and the brake system for leakage.

Observe these precautions:
- When checking the fluid level, make sure that the top of the brake fluid reservoir is level.
- Use only the recommended quality brake fluid, otherwise the rubber seals may deteriorate, causing leakage and poor braking performance.
- Refill with the same type of brake fluid. Mixing fluids may result in a harmful chemical reaction and lead to poor braking performance.

Recommended brake fluid: DOT 4
PERIODIC MAINTENANCE AND MINOR REPAIR

- Be careful that water does not enter the brake fluid reservoir when refilling. Water will significantly lower the boiling point of the fluid and may result in vapor lock.
- Brake fluid may deteriorate painted surfaces or plastic parts. Always clean up spilled fluid immediately.
- As the brake pads wear, it is normal for the brake fluid level to gradually go down. However, if the brake fluid level goes down suddenly, have a Yamaha dealer check the cause.

Changing the brake fluid

Have a Yamaha dealer change the brake fluid at the intervals specified in the NOTE after the periodic maintenance and lubrication chart. In addition, have the oil seals of the master cylinders and calipers as well as the brake hoses replaced at the intervals listed below or whenever they are damaged or leaking.

- Oil seals: Replace every two years.
- Brake hoses: Replace every four years.
PERIODIC MAINTENANCE AND MINOR REPAIR

Drive chain slack
The drive chain slack should be checked before each ride and adjusted if necessary.

To check the drive chain slack
1. Place the motorcycle on a level surface and hold it in an upright position.

NOTE:
When checking and adjusting the drive chain slack, the motorcycle should be positioned straight up and there should be no weight on it.

2. Shift the transmission into the neutral position.
3. Move the rear wheel by pushing the motorcycle to locate the tightest portion of the drive chain, and then measure the drive chain slack as shown.

4. If the drive chain slack is incorrect, adjust it as follows.

Drive chain slack:
40–50 mm (1.57–1.97 in)

To adjust the drive chain slack
1. Loosen the axle nut and the locknut on each side of the swingarm.
2. To tighten the drive chain, turn the adjusting bolt on each side of the swingarm in direction a. To loosen the drive chain, turn the adjusting bolt on each side of the swingarm in direction b, and then push the rear wheel forward.
NOTE: Using the alignment marks on each side of the swingarm, make sure that both chain pullers are in the same position for proper wheel alignment.

CAUTION: Improper drive chain slack will overload the engine as well as other vital parts of the motorcycle and can lead to chain slippage or breakage. To prevent this from occurring, keep the drive chain slack within the specified limits.

3. Tighten the locknuts, and then tighten the axle nut to the specified torque.

Tightening torque:
Axle nut: 150 Nm (15.0 m-kgf, 108 ft-lbf)

PERIODIC MAINTENANCE AND MINOR REPAIR

Lubricating the drive chain

The drive chain must be cleaned and lubricated at the intervals specified in the periodic maintenance and lubrication chart, otherwise it will quickly wear out, especially when riding in dusty or wet areas. Service the drive chain as follows.

1. Clean the drive chain with kerosene and a small soft brush.

2. Wipe the drive chain dry.

3. Thoroughly lubricate the drive chain with a special O-ring chain lubricant.

CAUTION:
Do not use engine oil or any other lubricants for the drive chain, as they may contain substances that could damage the O-rings.

CAUTION:

To prevent damaging the O-rings, do not clean the drive chain with steam cleaners, high-pressure washers or inappropriate solvents.
PERIODIC MAINTENANCE AND MINOR REPAIR

Checking and lubricating the cables
The operation of all control cables and the condition of the cables should be checked before each ride, and the cables and cable ends should be lubricated if necessary. If a cable is damaged or does not move smoothly, have a Yamaha dealer check or replace it.

**Recommended lubricant:**
- Yamaha Chain and Cable Lube
- engine oil SAE 10W-30 (API SE)

**WARNING**
Damage to the outer housing of cables may result in internal rusting and cause interference with cable movement. Replace damaged cables as soon as possible to prevent unsafe conditions.

Checking and lubricating the throttle grip and cable
The operation of the throttle grip should be checked before each ride. In addition, the cable should be lubricated or replaced at the intervals specified in the periodic maintenance chart.

Checking and lubricating the brake and clutch levers
The operation of the brake and clutch levers should be checked before each ride, and the lever pivots should be lubricated if necessary.

**Recommended lubricant:**
- Lithium-soap-based grease (all-purpose grease)
PERIODIC MAINTENANCE AND MINOR REPAIR

**Lubricating the brake pedal**
The operation of the brake pedal should be checked before each ride, and the pedal pivot should be lubricated if necessary.

**Recommended lubricant:**
Lithium-soap-based grease (all-purpose grease)

**Checking and lubricating the sidestand**
The operation of the sidestand should be checked before each ride, and the sidestand pivot and metal-to-metal contact surfaces should be lubricated if necessary.

**WARNING**
If the sidestand does not move up and down smoothly, have a Yamaha dealer check or repair it.

**Recommended lubricant:**
Lithium-soap-based grease (all-purpose grease)
PERIODIC MAINTENANCE AND MINOR REPAIR

Checking the front fork
The condition and operation of the front fork must be checked as follows at the intervals specified in the periodic maintenance and lubrication chart.

To check the condition

![WARNING]

Securely support the motorcycle so that there is no danger of it falling over.

Check the inner tubes for scratches, damage and excessive oil leakage.

To check the operation

1. Place the motorcycle on a level surface and hold it in an upright position.
2. While applying the front brake, push down hard on the handlebars several times to check if the front fork compresses and rebounds smoothly.

![CAUTION]

If any damage is found or the front fork does not operate smoothly, have a Yamaha dealer check or repair it.

Checking the steering
Worn or loose steering bearings may cause danger. Therefore, the operation of the steering must be checked as follows at the intervals specified in the periodic maintenance and lubrication chart.

1. Place a stand under the engine to raise the front wheel off the ground.

![WARNING]

Securely support the motorcycle so that there is no danger of it falling over.
PERIODIC MAINTENANCE AND MINOR REPAIR

Checking the wheel bearings
The front and rear wheel bearings must be checked at the intervals specified in the periodic maintenance and lubrication chart. If there is play in the wheel hub or if the wheel does not turn smoothly, have a Yamaha dealer check the wheel bearings.

2. Hold the lower ends of the front fork legs and try to move them forward and backward. If any free play can be felt, have a Yamaha dealer check or repair the steering.
PERIODIC MAINTENANCE AND MINOR REPAIR

Battery
This motorcycle is equipped with a sealed-type (MF) battery, which does not require any maintenance. There is no need to check the electrolyte or to add distilled water.

To charge the battery
Have a Yamaha dealer charge the battery as soon as possible if it seems to have discharged. Keep in mind that the battery tends to discharge more quickly if the motorcycle is equipped with optional electrical accessories.

WARNING
- Electrolyte is poisonous and dangerous since it contains sulfuric acid, which causes severe burns. Avoid any contact with skin, eyes or clothing and always shield your eyes when working near batteries. In case of contact, administer the following FIRST AID.
  - EXTERNAL: Flush with plenty of water.
  - INTERNAL: Drink large quantities of water or milk and immediately call a physician.
  - EYES: Flush with water for 15 minutes and seek prompt medical attention.

- Batteries produce explosive hydrogen gas. Therefore, keep sparks, flames, cigarettes, etc., away from the battery and provide sufficient ventilation when charging it in an enclosed space.

To store the battery
1. If the motorcycle will not be used for more than one month, remove the battery, fully charge it, and then place it in a cool, dry place.
2. If the battery will be stored for more than two months, check it at least once a month and fully charge it if necessary.
3. Fully charge the battery before installation.
4. After installation, make sure that the battery leads are properly connected to the battery terminals.
PERIODIC MAINTENANCE AND MINOR REPAIR

CAUTION:
- Always keep the battery charged. Storing a discharged battery can cause permanent battery damage.
- To charge a sealed-type (MF) battery, a special (constant-voltage) battery charger is required. Using a conventional battery charger will damage the battery. If you do not have access to a sealed-type (MF) battery charger, have a Yamaha dealer charge your battery.

Replacing the fuses

The main fuse and the electronic fuel injection fuse are located under the rider seat. (See page 3-15 for rider seat removal and installation procedures.)

The fuse box, which contains the fuses for the individual circuits, is located under panel B. (See page 6-11 for panel removal and installation procedures.)

If a fuse is blown, replace it as follows.

1. Turn the key to "OFF" and turn off the electrical circuit in question.
2. Remove the blown fuse, and then install a new fuse of the specified amperage.

| Specified fuses:                                                      |
|----------------------------------------------------------|-------|
| Main fuse:                                               | 50 A  |
| Headlight fuse:                                         | 20 A  |
| Signaling system fuse:                                   | 15 A  |
| Radiator fan fuse:                                      | 15 A  |
| Ignition fuse:                                          | 15 A  |
| Electronic fuel injection fuse:                         | 15 A  |
| Odometer and clock fuse (backup fuse):                   | 5 A   |
PERIODIC MAINTENANCE AND MINOR REPAIR

**CAUTION:**
Do not use a fuse of a higher amperage rating than recommended to avoid causing extensive damage to the electrical system and possibly a fire.

3. Turn the key to “ON” and turn on the electrical circuit in question to check if the device operates.

4. If the fuse immediately blows again, have a Yamaha dealer check the electrical system.

---

**Replacing a headlight bulb**

This motorcycle is equipped with quartz bulb headlights. If a headlight bulb burns out, replace it as follows.

1. Disconnect the headlight coupler, and then remove the bulb cover.

---

**WARNING**

Headlight bulbs get very hot. Therefore, keep flammable products away from a lit headlight bulb, and do not touch the bulb until it has cooled down.

3. Place a new headlight bulb into position, and then secure it with the bulb holder.
CAUTION: 

Take care not to damage the following parts:

- Headlight bulb
  Do not touch the glass part of the headlight bulb to keep it free from oil, otherwise the transparency of the glass, the luminosity of the bulb, and the bulb life will be adversely affected. Thoroughly clean off any dirt and finger prints on the headlight bulb using a cloth moistened with alcohol or thinner.

- Headlight lens
  - Do not affix any type of tinted film or stickers to the headlight lens.
  - Do not use a headlight bulb of a wattage higher than specified.

4. Install the headlight bulb cover, and then connect the coupler.
5. Have a Yamaha dealer adjust the headlight beam if necessary.

Tail/brake light

This motorcycle is equipped with an LED type of tail/brake light. If the tail/brake light does not come on, have a Yamaha dealer check it.
Replacing a turn signal light bulb
1. Remove the turn signal light lens by removing the screw.
2. Remove the defective bulb by pushing it in and turning it counterclockwise.
3. Insert a new bulb into the socket, push it in, and then turn it clockwise until it stops.
4. Install the lens by installing the screw.

Replacing the license plate light bulb
1. Remove the license plate light unit by removing the screws.

CAUTION: Do not overtighten the screw, otherwise the lens may break.
PERIODIC MAINTENANCE AND MINOR REPAIR

Supporting the motorcycle
Since this model is not equipped with a centerstand, follow these precautions when removing the front and rear wheel or performing other maintenance requiring the motorcycle to stand upright. Check that the motorcycle is in a stable and level position before starting any maintenance. A strong wooden box can be placed under the engine for added stability.

To service the front wheel
1. Stabilize the rear of the motorcycle by using a motorcycle stand or, if an additional motorcycle stand is not available, by placing a jack under the frame in front of the rear wheel.
2. Raise the front wheel off the ground by using a motorcycle stand.

To service the rear wheel
Raise the rear wheel off the ground by using a motorcycle stand or, if a motorcycle stand is not available, by placing a jack either under each side of the frame in front of the rear wheel or under each side of the swingarm.

1. License plate light bulb
2. License plate light unit

2. Remove the socket (together with the bulb) by pulling it out.
3. Remove the defective bulb by pulling it out.
4. Insert a new bulb into the socket.
5. Install the socket (together with the bulb) by pushing it in.
6. Install the license plate light unit by installing the screws.
PERIODIC MAINTENANCE AND MINOR REPAIR

Front wheel

To remove the front wheel

1. Loosen the axle bolt, the wheel axle pinch bolts, and then the brake caliper bolts.

WARNING

- It is advisable to have a Yamaha dealer service the wheel.
- Securely support the motorcycle so that there is no danger of it falling over.

2. Lift the front wheel off the ground according to the procedure on page 6-44.
3. Remove the brake hose holder on each side by removing the bolt and nut.
4. Remove the brake caliper and reflector on each side by removing the bolts.

CAUTION:

Do not apply the brake after the brake calipers have been removed, otherwise the brake pads will be forced shut.

5. Remove the axle bolt, pull the wheel axle out, and then remove the wheel.
PERIODIC MAINTENANCE AND MINOR REPAIR

To install the front wheel
1. Lift the wheel up between the fork legs.
2. Insert the wheel axle.
3. Lower the front wheel so that it is on the ground.
4. Install the brake calipers and reflectors by installing the bolts, and then tightening them to the specified torque.

NOTE:
- Make sure that there is enough space between the brake pads before installing the brake calipers onto the brake discs.

5. Install the brake hose holders by installing the bolts and nuts.
6. Secure the wheel axle by installing the axle bolt, and then tightening it to the specified torque.

7. Tighten wheel axle pinch bolts A and B to the specified torque.

8. Tap the outer side of the right fork leg with a rubber mallet to align it with the end of the wheel axle.
9. Tighten wheel axle pinch bolts C and D to the specified torque.
10. While applying the front brake, push down hard on the handlebar several times to check for proper fork operation.

Tightening torque:
- Brake caliper bolt: 40 Nm (4.0 m·kgf, 29 ft·lbf)
- Axle bolt: 91 Nm (9.1 m·kgf, 66 ft·lbf)
- Wheel axle pinch bolt: 18 Nm (1.8 m·kgf, 13 ft·lbf)

NOTE:
While tightening the axle bolt, hold the wheel axle with a 19-mm hexagon wrench to keep it from turning.
PERIODIC MAINTENANCE AND MINOR REPAIR

**Rear wheel**

To remove the rear wheel

**WARNING**
- It is advisable to have a Yamaha dealer service the wheel.
- Securely support the motorcycle so that there is no danger of it falling over.

1. Loosen the axle nut and the brake caliper bolts.
2. Lift the rear wheel off the ground according to the procedure on page 6-44.

**CAUTION:**

Do not apply the brake after the brake caliper has been removed, otherwise the brake caliper pistons will be forced out.

3. Remove the axle nut, and then remove the brake caliper by removing the bolts.
4. Loosen the locknut on each side of the swingarm.
5. Turn the drive chain slack adjusting bolts fully in direction ③.
6. Push the wheel forward, and then remove the drive chain from the rear sprocket.

**NOTE:** The drive chain does not need to be disassembled in order to remove and install the rear wheel.
PERIODIC MAINTENANCE AND MINOR REPAIR

To install the rear wheel
1. Install the wheel and the brake caliper bracket by inserting the wheel axle from the left-hand side.
2. Install the drive chain onto the rear sprocket, and then adjust the drive chain slack. (See page 6-33 for drive chain slack adjustment procedures.)
3. Install the axle nut, and then lower the rear wheel so that it is on the ground.
4. Install the brake caliper by installing the bolts.

NOTE:
- Make sure that there is enough space between the brake caliper pistons and brake caliper pad before installing the brake caliper.
- Tighten the axle nut and the brake caliper bolts to the specified torques.

Tightening torques:
- Axle nut: 150 Nm (15.0 m·kgf, 108 ft·lbf)
- Brake caliper bolt: 27 Nm (2.7 m·kgf, 19.5 ft·lbf)
PERIODIC MAINTENANCE AND MINOR REPAIR

Troubleshooting
Although Yamaha motorcycles receive a thorough inspection before shipment from the factory, trouble may occur during operation. Any problem in the fuel, compression, or ignition systems, for example, can cause poor starting and loss of power.

The following troubleshooting charts represent quick and easy procedures for checking these vital systems yourself. However, should your motorcycle require any repair, take it to a Yamaha dealer, whose skilled technicians have the necessary tools, experience, and know-how to service the motorcycle properly.

Use only genuine Yamaha replacement parts. Imitation parts may look like Yamaha parts, but they are often inferior, have a shorter service life and can lead to expensive repair bills.
Troubleshooting charts
Starting problems or poor engine performance

**WARNING**
Keep away open flames and do not smoke while checking or working on the fuel system.

1. Fuel
   - Check the fuel level in the fuel tank.
   - There is enough fuel. → Check the compression.
   - There is no fuel. → Supply fuel. → The engine does not start. → Check the compression.

2. Compression
   - Operate the electric starter.
   - There is compression. → Check the ignition.
   - There is no compression. → Have a Yamaha dealer check the vehicle.

3. Ignition
   - Wet
     - Wipe off with a dry cloth and correct the spark plug gaps, or replace the spark plugs.
   - Dry
     - Have a Yamaha dealer check the vehicle.
   - Open the throttle halfway and operate the electric starter.
   - The engine does not start. → Check the battery.

4. Battery
   - Operate the electric starter.
   - The engine turns over quickly. → The battery is good.
   - The engine turns over slowly. → Check the battery lead connections, and charge the battery if necessary.
   - The engine does not start. → Have a Yamaha dealer check the vehicle.
PERIODIC MAINTENANCE AND MINOR REPAIR

Engine overheating

**WARNING**
- Do not remove the radiator cap when the engine and radiator are hot. Scalding hot fluid and steam may be blown out under pressure, which could cause serious injury. Be sure to wait until the engine has cooled.
- After removing the radiator cap retaining bolt, place a thick rag, like a towel, over the radiator cap, and then slowly rotate the cap counterclockwise to the detent to allow any residual pressure to escape. When the hissing sound has stopped, press down on the cap while turning it counterclockwise, and then remove the cap.

**NOTE:**
If coolant is not available, tap water can be temporarily used instead, provided that it is changed to the recommended coolant as soon as possible.
MOTORCYCLE CARE AND STORAGE

Care .................................................................................................. 7-1
Storage .............................................................................................. 7-4
MOTORCYCLE CARE AND STORAGE

Care
While the open design of a motorcycle reveals the attractiveness of the technology, it also makes it more vulnerable. Rust and corrosion can develop even if high-quality components are used. A rusty exhaust pipe may go unnoticed on a car, however, it detracts from the overall appearance of a motorcycle. Frequent and proper care does not only comply with the terms of the warranty, but it will also keep your motorcycle looking good, extend its life and optimize its performance.

Before cleaning
1. Cover the muffler outlet with a plastic bag after the engine has cooled down.
2. Make sure that all caps and covers as well as all electrical couplers and connectors, including the spark plug caps, are tightly installed.
3. Remove extremely stubborn dirt, like oil burnt onto the crankcase, with a degreasing agent and a brush, but never apply such products onto seals, gaskets, sprockets, the drive chain and wheel axles. Always rinse the dirt and degreaser off with water.

Cleaning

CAUTION:
- Avoid using strong acidic wheel cleaners, especially on spoked wheels. If such products are used on hard-to-remove dirt, do not leave the cleaner on the affected area any longer than instructed. Also, thoroughly rinse the area off with water, immediately dry it, and then apply a corrosion protection spray.
- Improper cleaning can damage windshields, cowlings, panels, other plastic parts, and the muffler. Use only a soft, clean cloth or sponge with mild detergent and water to clean plastic. However, if the muffler cannot be thoroughly cleaned with mild detergent, alkaline products and a soft brush may be used.
**MOTORCYCLE CARE AND STORAGE**

- Do not use any harsh chemical products on plastic parts or the muffler. Be sure to avoid using cloths or sponges which have been in contact with strong or abrasive cleaning products, solvent or thinner, fuel (gasoline), rust removers or inhibitors, brake fluid, antifreeze or electrolyte.

- Do not use high-pressure washers or steam-jet cleaners since they cause water seepage and deterioration in the following areas: seals (of wheel and swing-arm bearings, fork and brakes), storage compartments, electric components (couplers, connectors, instruments, switches and lights), breather hoses and vents.

- For motorcycles equipped with a windshield: Do not use strong cleaners or hard sponges as they will cause dulling or scratching. Some cleaning compounds for plastic may leave scratches on the windshield. Test the product on a small hidden part of the windshield to make sure that it does not leave any marks. If the windshield is scratched, use a quality plastic polishing compound after washing.

After normal use
Remove dirt with warm water, a mild detergent, and a soft, clean sponge, and then rinse thoroughly with clean water. Use a toothbrush or bottlebrush for hard-to-reach areas. Stubborn dirt and insects will come off more easily if the area is covered with a wet cloth for a few minutes before cleaning.

After riding in the rain, near the sea or on salt-sprayed roads
Since sea salt or salt sprayed on roads during winter are extremely corrosive in combination with water, carry out the following steps after each ride in the rain, near the sea or on salt-sprayed roads.

**NOTE:**
Salt sprayed on roads in the winter may remain well into spring.

1. Clean the motorcycle with cold water and a mild detergent, after the engine has cooled down.

   **CAUTION:**
   Do not use warm water since it increases the corrosive action of the salt.

2. After drying the motorcycle, apply a corrosion protection spray on all metal, including chrome- and nickle-plated, surfaces (except the titanium muffler) to prevent corrosion.
MOTORCYCLE CARE AND STORAGE

Cleaning the titanium muffler
This model is equipped with a titanium muffler, which requires the following special care.

- Use only a soft, clean cloth or sponge with mild detergent and water to clean the titanium muffler. However, if the muffler cannot be thoroughly cleaned with mild detergent, alkaline products and a soft brush may be used.
- Never use compounds or other special treatments to clean the titanium muffler, as they will remove the finish on the outer surface of the muffler.
- Even the smallest amounts of oil, such as from oily towels or fingerprints, will leave stains on the titanium muffler, which can be removed with a mild detergent.
- Note that the thermally induced discoloring of the portion of the exhaust pipe leading into the titanium muffler is normal and cannot be removed.

After cleaning
1. Dry the motorcycle with a chamois or an absorbing cloth.
2. Immediately dry the drive chain and lubricate it to prevent it from rusting.
3. Use a chrome polish to shine chrome, aluminum and stainless-steel parts.
4. To prevent corrosion, it is recommended to apply a corrosion protection spray on all metal, including chrome- and nickel-plated, surfaces.
5. Use spray oil as a universal cleaner to remove any remaining dirt.
6. Touch up minor paint damage caused by stones, etc.
7. Wax all painted surfaces.
8. Let the motorcycle dry completely before storing or covering it.

WARNING
- Make sure that there is no oil or wax on the brakes or tires.
- If necessary, clean the brake discs and brake linings with a regular brake disc cleaner or acetone, and wash the tires with warm water and a mild detergent. Before riding at higher speeds, test the motorcycle's braking performance and cornering behavior.
CAUTION:

- Apply spray oil and wax sparingly and make sure to wipe off any excess.
- Never apply oil or wax to any rubber and plastic parts, but treat them with a suitable care product.
- Avoid using abrasive polishing compounds as they will wear away the paint.

NOTE:

Consult a Yamaha dealer for advice on what products to use.

MOTORCYCLE CARE AND STORAGE

Storage

Short-term

Always store your motorcycle in a cool, dry place and, if necessary, protect it against dust with a porous cover.

CAUTION:

- Storing the motorcycle in a poorly ventilated room or covering it with a tarp, while it is still wet, will allow water and humidity to seep in and cause rust.
- To prevent corrosion, avoid damp cellars, stables (because of the presence of ammonia) and areas where strong chemicals are stored.

Long-term

Before storing your motorcycle for several months:

1. Follow all the instructions in the “Care” section of this chapter.
2. Fill up the fuel tank and add fuel stabilizer (if available) to prevent the fuel tank from rusting and the fuel from deteriorating.
3. Perform the following steps to protect the cylinders, piston rings, etc. from corrosion.
MOTORCYCLE CARE AND STORAGE

a. Remove the spark plug caps and spark plugs.
b. Pour a teaspoonful of engine oil into each spark plug bore.
c. Install the spark plug caps onto the spark plugs, and then place the spark plugs on the cylinder head so that the electrodes are grounded. (This will limit sparking during the next step.)
d. Turn the engine over several times with the starter. (This will coat the cylinder walls with oil.)
e. Remove the spark plug caps from the spark plugs, and then install the spark plugs and the spark plug caps.

\[\text{WARNING}\]
To prevent damage or injury from sparking, make sure to ground the spark plug electrodes while turning the engine over.

4. Lubricate all control cables and the pivoting points of all levers and pedals as well as of the sidestand/centerstand.

5. Check and, if necessary, correct the tire air pressure, and then lift the motorcycle so that both of its wheels are off the ground. Alternatively, turn the wheels a little every month in order to prevent the tires from becoming degraded in one spot.

6. Cover the muffler outlet with a plastic bag to prevent moisture from entering it.

7. Remove the battery and fully charge it. Store it in a cool, dry place and charge it once a month. Do not store the battery in an excessively cold or warm place [less than 0 °C (30 °F) or more than 30 °C (90 °F)]. For more information on storing the battery, see page 6-39.

NOTE: Make any necessary repairs before storing the motorcycle.

YAMAHA MOTOR CORPORATION, U.S.A.

STREET AND ENDURO MOTORCYCLE LIMITED WARRANTY

Yamaha Motor Corporation, U.S.A. hereby warrants each new model Yamaha motorcycle will be free from defects in material and workmanship for the period of time stated herein, subject to certain stated limitations.

THE PERIOD OF WARRANTY for Yamaha motorcycles originally equipped with headlight, stoplight, and turn signals shall be one (1) year from the date of purchase, with no mileage limitation.

MODELS EXCLUDED FROM WARRANTY include those used for non-Yamaha-authorized renting, leasing, or other commercial purposes, and TZ models.

DURING THE PERIOD OF WARRANTY any authorized Yamaha motorcycle dealer will, free of charge, repair or replace any part adjudged defective by Yamaha due to faulty workmanship or material from the factory. Parts used in warranty repairs will be warranted for the balance of the product's warranty period. All parts replaced under warranty become property of Yamaha Motor Corp. U.S.A.

GENERAL EXCLUSIONS from this warranty shall include any failures caused by:

a. Competition or racing use;

b. Installation of parts or accessories that are not qualitatively equivalent to genuine Yamaha parts;

c. Abnormal strain, neglect, or abuse;

d. Lack of proper maintenance;

e. Accidental or collision damage;

f. Modification to original parts.

SPECIFIC EXCLUSIONS from this warranty shall include parts replaced due to normal wear or routine maintenance.

THE CUSTOMER'S RESPONSIBILITY under this warranty shall be to:

1. Operate and maintain the motorcycle as specified in the appropriate Owner's Manual, and

2. Give notice to an authorized Yamaha motorcycle dealer of any and all apparent defects within ten (10) days after discovery, and make the machine available at that time for inspection and repair at such dealer's place of business.

WARRANTY TRANSFER: To transfer the warranty from the original purchaser to any subsequent purchaser, it is imperative that the machine be inspected and registered for warranty by an authorized Yamaha motorcycle dealer. In order for this warranty to remain in effect, this inspection and registration must take place within ten (10) days after transfer. An inspection and registration fee will be charged for this service.

EMISSIONS CONTROL SYSTEM WARRANTY Yamaha Motor Corporation, U.S.A. also warrants to the ultimate purchaser and each subsequent purchaser of each Yamaha motorcycle covered by this warranty with a displacement of 50cc or greater, that the vehicle is designed, built, and equipped so as to conform at the time of sale with all U.S. emissions standards applicable at the time of manufacture and that it is free from defects in material and workmanship which would cause it not to meet these standards within the periods listed immediately below. Failure other than those resulting from defects in material or workmanship which arise solely as a result of owner abuse and/or lack of proper maintenance are not covered by this warranty.

YAMAHA MOTOR CORPORATION, U.S.A. MAKES NO OTHER WARRANTY OF ANY KIND, EXPRESSED OR IMPLIED, ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE WHICH EXCEED THE OBLIGATIONS AND TIME LIMITS STATED IN THIS WARRANTY ARE HEREBY DISCLAIMED BY YAMAHA MOTOR CORPORATION, U.S.A. AND EXCLUDED FROM THIS WARRANTY.

SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS, SO THE ABOVE LIMITATION MAY NOT APPLY TO YOU. ALSO EXCLUDED FROM THIS WARRANTY ARE ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES INCLUDING LOSS OF USE. SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE EXCLUSION MAY NOT APPLY TO YOU.

THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, AND YOU MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM STATE TO STATE.

WARRANTY QUESTIONS AND ANSWERS

Q. What costs are my responsibility during the warranty period?
A. The customer's responsibility includes all costs of normal maintenance services, non-
warranty repairs, accident and collision damages, and oil, oil filters, air filters, spark
plugs, and brake shoes.

Q. What are some examples of "abnormal strain, neglect, or abuse"?
A. These terms are general and overlap each other in areas. Specific examples include:
Running the machine out of oil, sustained high-rpm, full-throttle, operating the
machine with a broken or damaged part which causes another part to fail, damage
or failure due to improper or careless transportation and or tie down. If you have any
specific questions on operation or maintenance, please contact your dealer for advice.

Q. Does the warranty cover incidental costs such as towing or transportation due to
a failure?
A. No. The warranty is limited to repair of the machine itself.

Q. May I perform any or all of the recommended maintenance shown in the Owner's
Manual instead of having the dealer do them?
A. Yes, if you are a qualified mechanic and follow the procedures specified in the Owner's
and Service Manual. We do recommend, however, that items requiring special tools
or equipment be done by a Yamaha Motorcycle dealer.

Q. Will the warranty be void or cancelled if I do not operate or maintain my new motorcycle
exactly as specified in the Owner’s Manual?
A. No. The warranty on a new motorcycle cannot be "voided" or "cancelled." However,
if a particular failure is caused by operation or maintenance other than as shown
in the Owner's Manual, that failure may not be covered under warranty.

Q. What responsibility does my dealer have under this warranty?
A. Each Yamaha Motorcycle dealer is expected to:
1. Completely set up every new machine before sale.
2. Explain the operation, maintenance, and warranty requirements to your satis-
faction at the time of sale, and upon your request at any later date.
3. Each Yamaha Motorcycle dealer is held responsible for his setup, service and
warranty repair work.

Q. Is the warranty transferable to second owners?
A. Yes. The remainder of the existing warranty can be transferred upon request. The
unit has to be inspected and re-registered by an authorized Yamaha Motorcycle dealer
for the policy to remain effective.

CUSTOMER SERVICE

If your machine requires warranty service, you must take it to any authorized
Yamaha Motorcycle dealer within the continental United States. Be sure to
bring your warranty registration card or other valid proof of the original date
of purchase. If a question or problem arises regarding warranty, first con-
tact the owner of the dealership. Since all warranty matters are handled at
the dealer level, this person is in the best position to help you. If you are
still not satisfied and require additional assistance, please write:

YAMAHA MOTOR CORPORATION U.S.A.
CUSTOMER RELATIONS DEPARTMENT
P.O. Box 6655
Cypress, California 90630

When contacting Yamaha Motor Corporation, U.S.A. don't forget to include
any important information such as names, addresses, model, V.I.N. (frame
number), dates, and receipts.

CHANGE OF ADDRESS

The federal government requires each manufacturer of a motor vehicle to
maintain a complete, up-to-date list of all first purchasers against the
possibility of a safety-related defect and recall. This list is compiled from
the purchase registrations sent to Yamaha Motor Corporation, U.S.A. by the
selling dealer at the time of your purchase.

If you should move after you have purchased your new motorcycle, please
advise us of your new address by sending a postcard listing your motorcycle
model name, V.I.N. (frame number), dealer number (or dealer's name) as it
is shown on your warranty card, your name and new mailing address. Mail to:

YAMAHA MOTOR CORPORATION, U.S.A.
P.O. Box 6655
Cypress, California 90630
Attention: Warranty Department

This will ensure that Yamaha Motor Corporation, U.S.A. has an up-to-date
registration record in accordance with federal law.

YAMAHA EXTENDED SERVICE (Y.E.S.)

Keep your Yamaha protected even after your warranty expires with genuine Yamaha Extended Service (Y.E.S.).

- Y.E.S. is designed and administered by Yamaha Motor Corporation to provide maximum owner satisfaction. You get uninterrupted factory-backed coverage for extra peace of mind.
- Y.E.S. is flexible. You choose the plan that's right for you: 12 months, 24 months, 36 months or, on certain models, even 48 months beyond your warranty period.
- Y.E.S. is designed and administered by the same Yamaha people who handle your warranty – and it shows in the comprehensive coverage benefits. There are no mileage limitations. Coverage isn't limited to "moving parts" or the "drive train" like many other plans. And Y.E.S. covers manufacturing defects just like the warranty. See the sample contract at your Yamaha dealer to see how comforting uninterrupted factory-backed protection can be.
- You don't have to pay anything for covered repairs. There's no deductible to pay, and repairs aren't "pro-rated." You don't have any "out-of-pocket" expenses for covered repairs.
- In addition, Travel and Recreation Interruption Protection (TRIP) is included at no extra cost. TRIP gives you up to $150 reimbursement per occurrence for any reasonable expenses you incur because your Yamaha needs covered service: replacement vehicle rental, emergency towing, phone calls, even food and lodging when you are away from home. This superb coverage goes into effect when you purchase Y.E.S., so it applies to any warranty repairs as well as covered repairs during your entire Y.E.S. plan period.
- Y.E.S. coverage is honored at any authorized Yamaha dealer nationwide.
- Y.E.S. coverage is transferable to a new owner if you sell or trade-in. That can make your Yamaha much more valuable!

This excellent Y.E.S. plan coverage is only available to Yamaha owners like you, and only while your Yamaha is still within the Yamaha Limited Warranty period. So visit your authorized Yamaha dealer to get all the facts. He can show you how easy it is to protect your investment with Yamaha Extended Service.
We urge you to act now. You’ll get the excellent benefits of TRIP coverage right away, and you’ll rest easy knowing you’ll have strong factory-backed protection even after your Yamaha Limited Warranty expires.

A special note:
If visiting your dealer isn’t convenient, contact Yamaha with your Primary ID number (your frame number). We’ll be happy to help you get the Y.E.S. coverage you need.
